This is Hepatitis... GET THE FACTS!

Over 350,000 people in
Australia have chronic
hepatitis B or C

Liver disease can occur
slowly and without symptoms
if left untreated

Symptoms may include fatigue,
abdominal pain, irritability
and depression

Hepatitis is the leading cause
of liver transplants in Australia

Hepatitis B is transmitted
through blood to blood contact
and unprotected sex. A vaccine
is available

Hepatitis C is transmitted
through blood to blood contact.
No vaccine is available.

A simple test will tell you if you
have hepatitis B or C.

Both hepatitis B and C can be
managed and treated.

Call 1300 437 222
(1300 HEP ABC) for information
and referral
